

VM Composer

Robbie VanVossen : DornerWorks

Hypervisor Modelling Tool

- Embedded workflows
- Drag & drop interface
- “Easy button” for development
- Generates configuration files
- Builds deployable image
- Integrates with CI/CD pipelines
- Enables complex virtual configurations

Simplifies Development

Automatically generates system configuration files for:

- Memory allocation
- Physical IO devices
- Virtual devices
- Inter-VM communication
- Scheduling/Core allocation

Pre-built Linux images enables rapid prototyping:

- Generic Image
- Container enabled Image (Supports quick container deployment)

Name	Destination	Direction
virtChan0	Critical VM	inout
virtChan1	Network VM	inout

Platforms & Guests

- Supports many guest Operating Systems
- Well supported development boards
- Custom boards with supported processors

DornerWorks can port:

- New Oses
- New boards

I am at the summit! If I am not in front on my poster come and find me to talk about my work.
